NGUYEN QUOC TRUNG

Business Analyst Intern

quoctrung121212@gmail.com | Ho Chi Minh City, Vietnam

Portfolio: qtrung-data-portfolio.netlify.app | GitHub: github.com/qtrung123

SUMMARY

Final-year Information Technology student who starts from the business question and uses data to answer it: defining KPIs, validating data, and presenting findings in dashboards and short case studies. Seeking a Business Analyst internship to learn how teams turn business needs into data-driven decisions.

TECHNICAL SKILLS

Analysis & Reporting: KPI Monitoring, Dashboard Design, EDA, Cohort Analysis, Power BI, Excel
Data & Modeling: SQL, Data Modeling, Data Validation, Data Quality, Data Cleaning
Programming: Python, Pandas
Tools: Git, GitHub, Jupyter Notebook

PROJECTS

TerraFirm Safety Analytics 2025

Tools: Power BI | DAX | Power Query

- Designed a 6-page Power BI dashboard from 9 operational datasets, one page per question a safety manager would ask: outcomes, preventive activity, field risk, incidents, training and a single-site view.
- Defined reusable DAX measures and validation logic so KPIs stay consistent across pages and abnormal values are flagged.
- Compared a 44.8% drop in YTD recordables (29 → 16) with a 29.9% preventive-cadence rate to highlight sites for follow-up, without claiming a causal link.

Online Ticket Booking — Customer Retention Study 11/2025 – 02/2026

Tools: Python | Pandas | Data Validation | EDA

- Cleaned and integrated 5 raw tables (154,723 transactions), resolving missing values, duplicates, invalid dates and inconsistent categories before any analysis.
- Investigated payment and transaction-quality issues first, so customer-behavior findings rest on validated data.
- Built cohort and purchase-sequence analysis comparing second-purchase rates of promotion-exposed vs non-exposed customers (13.09% vs 12.20%), reported as a descriptive signal rather than proof of impact.

SQL Server Data Warehouse 02/2026 – 04/2026

Tools: SQL Server | T-SQL | ETL | Data Validation

- Integrated 6 CSV exports from two source systems (CRM and ERP) into a SQL Server warehouse, reconciling mismatched keys, date formats and gender codes.
- Modelled the Gold layer as a star schema (1 fact view, 2 dimension views) so reporting reads from consistent business definitions.
- Wrote SQL quality checks for duplicate/null keys, invalid values and business-rule violations, and validated dimension-key uniqueness and fact-to-dimension referential integrity.

EDUCATION

International University – Vietnam National University HCMC Expected 2026

Bachelor of Information Technology

EXPERIENCE

Part-time Sales — Nhen Store 6 months

Ho Chi Minh City, Vietnam

- Tracked customer orders, sales records and monthly payment data in Excel, keeping records accurate and organized for routine operational follow-up.
